

Solution of Machine Structure 1 Examination**Exercise 1**

In this exercise, numbers will be represented in 8 bits.

1. Code the decimal numbers in binary: **32** and **122**. (0.5*2pt)

$(32)_{10} = (00100000)_2$ and $(122)_{10} = (01111010)_2$

2. Code the integers **(+122)** and **(-32)** in 1's complement and in 2's complement. (2pt)

Decimal	1's Complement	2' Complement
+122	01111010	01111010
-32	11011111	11100000

3. Calculate, in binary, the addition of the two decimal numbers **122** and **(- 32)**. (1pt)

```

  01111010
- 00100000
-----
  01011010

```

4. Can the result of adding the two numbers **(-122)** and **(-32)** be represented in sign and absolute value using 8 bits? If so, why? If not, what are the limitations ? (1pt)

No, we cannot represent $-122 + -32$ in binary using 8 bits because the result of the addition in decimal will be -154 , and we cannot represent -154 on 8 bits according to the sign and absolute value representation. It requires 9 bits to represent it.

Exercise 2

The coding of a real number in floating point is done according to the IEEE 754 -32 standard:

$$(-1)^S \times (1, M_n) \times 2^E$$

- S: the sign bit.

- E: the exponent represented in 8-bit (coded with excess 127).

- M_n : the mantissa normalized to 23 bits.

1. What are the smallest and largest decimal values for the exponent ? (0.5*2pt)

The exponent is encoded with excess 127, meaning it is represented by the binary equivalent C such that: $C = E + 127$.

Let E_L and E_S be the largest and smallest value of the exponent.

As the representation of C is done in binary in 8 bits, therefore: $C_L = 2^8 - 1 = 255$; $C_S = 0$

Hence $C_L = E_L + 127 \leftrightarrow E_L = 255 - 127 = 128$

$C_S = E_S + 127 \leftrightarrow E_S = 0 - 127 = -127$

2. Code the following real numbers according to the IEEE standard 754-32: **(-17,75)** and **(+21,05)** (2pt)

- $(-17,75)_{10} = (10001,11)_2 = (-1)^1 \times (1,000111) \times 2^4 \Leftrightarrow E=4 \Rightarrow C = 4+127 = 131 = (10000011)_2$

$(-17,75)_{10} = (1 \ 10000011 \ 000111000000000000000000)_{\text{IEEE 754-32}}$

- $(+21,05)_{10} = (10101.00000101)_2 = (-1)^0 \times (1,010100000101) \times 2^4 \Leftrightarrow E=4 \Rightarrow C = 4+127 = 131 = (10000011)_2$

$(+21,05)_{10} = (0 \ 10000011 \ 010100000101000000000000)_{\text{IEEE 754-32}}$

3. Convert to decimal the binary number (1 10000100 100101000000000000000000) representing a sequence of bits coded according to the IEEE 754-32 standard. (2pt)

$(1 \ 10000100 \ 100101000000000000000000)_{\text{IEEE 754-32}} \Leftrightarrow S = 1, C = (10000100)_2 = 132 \Rightarrow E = 132 - 127 = 5$ **0,5 pt**

$M_n = 100101 \Leftrightarrow (-1)^1 \times (1,100101) \times 2^5$ **0.5pt** $\Rightarrow (110010.1)_2 = (-50,5)_{10}$ **1 pt**

Exercise 3 (6pt)

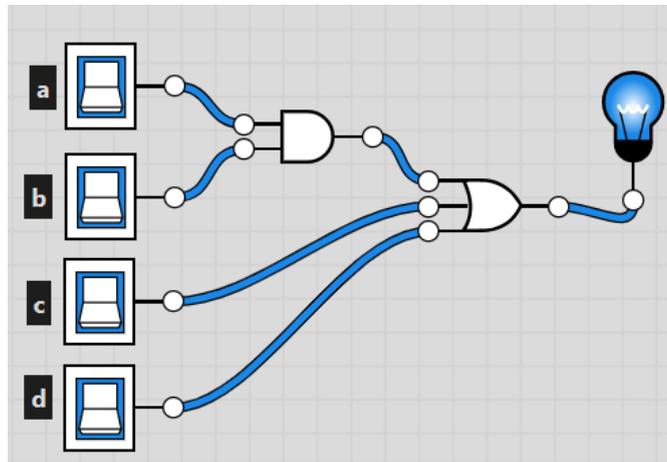

1. Simplify algebraically the following equation $E = (a+c+d) (b+c+d)$ and give its circuit with minimum of gates. (2pt)

Method 1: 1pt

$E = (a+(c+d)) (b+(c+d)) = ab + a (c+d) + b (c+d) + (c+d) (c+d) = ab + a (c+d) + b (c+d) + (c+d) = ab + (c+d) (a + b + 1) = ab + c + d$

Method 2:

$E = (a + c + d) (b + c + d) = ab + ac + ad + bc + cc + cd + bd + cd + dd = ab + ac + ad + bc + c + cd + bd + d = ab + (1+a+b+d) c + (1+a+b) d = ab + c + d$

Logigram representing the function E. **1pt**

2. Express $a \oplus b$ in the **second canonical form**. (0,5*2 pt)

a	b	$a \oplus b$	maxtermes
0	0	0	$a + b$
0	1	1	
1	0	1	
1	1	0	$\bar{a} + \bar{b}$

$$a \oplus b = (a + b)(\bar{a} + \bar{b})$$

3. When does $(a \oplus b \oplus c) + (a \oplus c) = 0$? (1pt)

Method 1:

a	b	c	$a \oplus b$	$a \oplus b \oplus c$	$a \oplus c$	$(a \oplus b \oplus c) + (a \oplus c)$
0	0	0	0	0	0	0
0	0	1	0	1	1	1
0	1	0	1	1	0	1
0	1	1	1	0	1	1
1	0	0	1	1	1	1
1	0	1	1	0	0	0
1	1	0	0	0	1	1
1	1	1	0	1	0	1

Method 2:

$$(a \oplus b \oplus c) + (a \oplus c) = 0 \Leftrightarrow a \oplus b \oplus c = 0 \text{ et } a \oplus c = 0 \Leftrightarrow (a \oplus c) \oplus b = 0 \text{ et } a = c \Leftrightarrow 0 \oplus b = 0 \text{ et } a = c \Leftrightarrow b = 0 \text{ et } a = c$$

4. Provide the simplified function while clearly showing the grouping in the Karnaugh table:(2pt)

ab \ cd	00	10	11	01
00	0	0	1	0
10	0	1	1	0
11	0	1	1	0
01	0	1	0	1

$F_3(a,b,c,d) = ac + bc\bar{d} + \bar{b}cd + \bar{a}b\bar{c}d$

ab \ cd	00	10	11	01
00	1	1	1	0
10	1	0	1	0
11	1	0	1	0
01	1	0	1	1

$F_4(a,b,c,d) = \bar{c}\bar{d} + cd + \bar{a}\bar{b}c + \bar{a}bd$

ab \ cd	00	10	11	01
00	0	0	0	0
10	1	1	1	1
11	0	1	1	0
01	0	1	1	0

$F_1(a,b,c,d) = \bar{a}\bar{b} + bc$

ab \ cd	00	10	11	01
00	1	0	1	1
10	0	0	0	0
11	0	0	0	0
01	1	1	0	1

$F_2(a,b,c,d) = \bar{a}\bar{c} + \bar{a}\bar{b}d + \bar{a}b\bar{d}$

Exercise 4 (4pts)

Create a logic circuit to check whether a four-digit (a,b,c and d) binary number is prime .

1° Truth table: (1pt)

a	b	c	d	F	TypeTerm	Term
0	0	0	0	0	Max	$a+b+c+d$
0	0	0	1	1	Min	$\bar{a}\bar{b}\bar{c}d$
0	0	1	0	1	Min	$\bar{a}\bar{b}c\bar{d}$
0	0	1	1	1	Min	$\bar{a}\bar{b}cd$
0	1	0	0	0	Max	$a+b+\bar{c}+\bar{d}$
0	1	0	1	1	Min	$\bar{a}b\bar{c}d$
0	1	1	0	0	Max	$a+b+\bar{c}+\bar{d}$
0	1	1	1	1	Min	$\bar{a}bcd$
1	0	0	0	0	Max	$\bar{a}+b+c+d$
1	0	0	1	0	Max	$\bar{a}+b+c+\bar{d}$

2°: Canonical Forms: (0.5*2pt)

1st Canonical Form: Sum of MinTerm:

$F(a,b,c,d) = \bar{a}\bar{b}\bar{c}d + \bar{a}\bar{b}c\bar{d} + \bar{a}\bar{b}cd + \bar{a}b\bar{c}d + \bar{a}bcd + a\bar{b}\bar{c}\bar{d} + a\bar{b}\bar{c}d$

2nd canonical Form: Product of MaxTerm:

$F(a,b,c,d) = (a+b+c+d)(a+b+\bar{c}+\bar{d})(a+\bar{b}+\bar{c}+\bar{d})(\bar{a}+b+c+d)(\bar{a}+b+c+\bar{d})(\bar{a}+b+\bar{c}+d)(\bar{a}+\bar{b}+\bar{c}+\bar{d})$

1	0	1	0	0	Max	$\bar{a}+b+\bar{c}+d$
1	0	1	1	1	Min	$ab\bar{c}d$
1	1	0	0	0	Max	$\bar{a}+\bar{b}+c+d$
1	1	0	1	1	Min	$ab\bar{c}d$
1	1	1	0	0	Max	$\bar{a}+\bar{b}+\bar{c}+d$
1	1	1	1	0	Max	$\bar{a}+\bar{b}+\bar{c}+\bar{d}$

3° Simplification (0.5*2 pt)

	cd	00	10	11	01
ab	00	0	1	1	1
	10	0	0	1	0
	11	0	0	0	1
	01	0	0	1	1

$$F(a,b,c,d) = \bar{a}d + \bar{a}b\bar{c} + b\bar{c}d + b\bar{c}d$$

4° Logigram (logical circuit) 1pt
