## Larbi Ben M'hidi-Oum El Bouaghi University

## Faculty of Exact Sciences and Natural and Life Sciences <br> Departement of Mathematics and Computer Science

First year Licence Introduction to probability and descriptive statistics

## Series $\mathrm{N}^{\mathrm{o}} 1$ : Bacis concepts and statistical vocabulary

Exercise 01 : Classify each variable as qualitative (ordinal or nominol) or quantitative (discrete or continuous).
$X_{1}$ : number of accidents in a city
$X_{2}$ : eye color of people
$X_{3}$ : Age of people in years
$X_{5}$ : Genders of newborns in a hospital $X_{4}$ : number of correct answers on a quiz $X_{6}$ : scientific fields
$X_{7}$ : Nationality of the workers in a city $X_{8}$ : level of studies
$X_{9}$ : Amount of maney spent by families
$X_{11}$ : Academic ranks of teachers $X_{10}$ : Lifetime of computers
$X_{13}$ : Rating scale of products $X_{12}$ : number of students in a classrooms
(bad, good, or excellent)

Exercise 02 : List all the measurements (observations) for the data set reprented by the following data frequency table :

| Values $x_{i}$ | 31 | 32 | 33 | 34 | 35 |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Frequency $n_{i}$ | 1 | 5 | 6 | 4 | 2 |

Exercise $03 \star$ : Construct the data frequency table for the following data set

$$
\begin{array}{llllllllll}
22 & 25 & 22 & 27 & 24 & 23 & 26 & 24 & 22 & 24
\end{array} 26
$$

Exercise $04 \star$ : Let the following data set :

$$
\begin{array}{lllllllll}
100 & 99 & 115 & 87 & 105 & 107 & 105 & 119 & 80
\end{array} 118
$$

Grouping these measures in the following classes : [80, $90[$, $90,100[$, and so on.
Exercise 05 : In a particular store, the weekly sales of a product for the last weeks are as follows :

$$
\begin{array}{rllllllllll}
15 & 14 & 14 & 18 & 15 & 17 & 16 & 16 & 18 & 15 & 19 \\
19 & 15 & 15 & 16 & 18 & 17 & 17 & 16 & 15 &
\end{array}
$$

1. What is the population of interest? and determine the population size.
2. What is the variable of interest? and determine its type.
3. Complete the following frequency table:

| Number of products sold |  |  |  |  |  |  | $\sum$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Number of weeks |  |  |  |  |  |  |  |
| Relative frequency $f_{i}=\frac{n_{i}}{n}$ |  |  |  |  |  |  |  |
| Percentage $\quad p_{i}=f_{i} \times 100(\%)$ |  |  |  |  |  |  |  |
| Increasing Cumulative Frequency <br> ICF $\quad N_{x=x_{i}} \uparrow$ |  |  |  |  |  |  |  |
| Decreasing Cumulative Frequency <br> DCF $\quad N_{x=x_{i}} \downarrow$ |  |  |  |  |  |  |  |
| Increasing Cumulative Relative <br> Frequency ICRF $\quad F_{x=x_{i}} \uparrow$ |  |  |  |  |  |  |  |
| Decreasing Cumulative Relative <br> Frequency DCRF $\quad F_{x=x_{i}} \downarrow$ |  |  |  |  |  |  |  |

Remark: write the formula mathematic of ICF, DCF, ICRF, and DCRF.
Exercise 06 : The revision time per week, in hours, of a group of students is given in increasing order as follows :
$\begin{array}{llllllllllllllllllll}4 & 7 & 8 & 9 & 10 & 11 & 12 & 12 & 12 & 13 & 14 & 14 & 14 & 15 & 16 & 16 & 17 & 17 & 19 & 23\end{array}$

1. Determine the population studied, the population size, the variable studied, and its type.
2. Using Sturge's rule (or Yule's rule), grouping the measures of the previous data set.
3. Complete the table by calculating : Increasing Cumulative Frequency (ICF) and Increasing Cumulative Relative Frequency (ICRF).
